UltraClear™

Full Vision Doors

3 YEAR WARRANTY

The Full Vision Door With Authentic Value

Unsurpassed Durability
Constructed of the most advanced materials available. Ultraclear™ doors deliver state-of-the-art features to provide you with maximum durability in both standard and demanding applications.

Reliable Operation
Designed for high-use applications, Ultraclear™ doors feature a better system design and superior hardware that ensures reliable operation year-after-year.

Low Maintenance
Engineered and manufactured for minimal maintenance and service.
Reduces annual costs and delivers a better overall value for your operation.

Attractive
Distinct full-vision appearance with insulated glass panels enhance the curb appeal of your building and allows for complete visibility. These aesthetics strengthen the promotion of your business's services and improves your overall image. Provides round-the-clock customer and employee comfort with clear glass panels.

Complete Weather Protection
Protects customers, vehicles, building interior and equipment from wind, cold weather and other elements. Choose from single pane or insulated glass panels. Panels are fully-gasketed and sealed for complete climate protection.

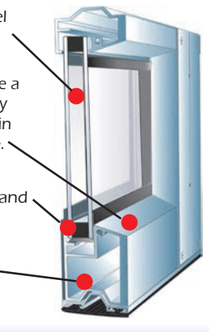
Top Quality Section Construction

5/8" Insulated or Single Glass Panels
Sealed insulated 5/8" tempered glass provides maximum visibility and exceptional strength. 1/8" glass or other panel materials available.

Aluminum Alloy Frame
Corrosion resistant aluminum stiles with beveled rails provide a strong, durable frame that naturally sheds moisture. 4" heavy duty bottom rail ensures bottom section integrity. Available in powdercoat or anodized finishes to match your color theme.

Panel Gasket
Flexible gasketed frame seals glass from exterior elements and air infiltration.

Beveled Aluminum Rails
Tongue & groove and beveled meeting rails shed moisture and eliminate watertraps.



4 Hardware Models To Choose From:

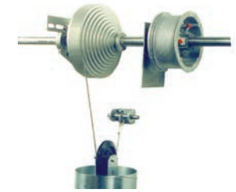
- Bearings: Freeway, Standard
- Cable: 5/32" Galvanized Steel
- Rollers: 2" Commercial Steel Rollers
- Fasteners: Galvanized Steel
- Torsion Spring Models- Galvanized

Choose From 3 Counterbalance Systems



Made In U.S.A.

• Strap Counterweight
Featuring a durable, rust-proof spool, aluminum winding hub, counterweight, guide tube and tough, virtually unbreakable reinforced nylon strap, this model offers you hundreds of thousands of cycles of smooth, quiet, and dependable operation of your door system in the most demanding conditions. The best selection for automatic car washes and other highly corrosive, high cycle situations where maximum life, low maintenance and reliability are essential. Totally adjustable. Best used with automated doors.

• Cable Counterweight
The cable counterweight models feature an aluminum counterweight drum, counterweight, guide tube and stainless steel non-rotating cable for smooth, reliable operation of your door cycle-after-cycle in rigorous conditions. Use for doors that require a counterweight system and are oversized or match your existing systems. Best used with automated doors.

• Rust-Resistant Torsion Springs
Excellent for either manual or automated door systems, our high cycle spring models offer over 100,000 cycles of safe, smooth and perfectly balanced operation. Choose either our standard hot-dipped galvanized wire for standard protection or upgrade to totally rust-resistant stainless steel wire. Spring models provide you with 100% perfect balancing with no jarring and less cable spooling.

*Bronze models provided with 12,000 cycle springs only

What Makes Ultraclear™ Products Better? Quality Components

The Pioneer of Stainless Steel Track & Hardware
Heavy duty stainless steel track and hardware were developed to give you the toughest rust-proof qualities in the industry. Select our Gold or Platinum models to ensure your door will withstand the test of time in the most punishing environments.

Incredibly tough, wear and crack resistant, our 3" track, bearing plates, bearings, shaft, cable, fasteners, 12ga. face hardware and pusher springs are manufactured with high quality 304 grade stainless steel. Provides you with the rust-free durability you need in wet, corrosive environments. 316 grade stainless steel also available.

High Quality Rollers
Select from the "Original" or "Supreme" Magnum™ roller designs or choose our bearingless rollers to match the performance, reliability and durability you need in your unique application and exposure.
Choose our "Supreme" Magnums with stainless steel bearings for the best in rust resistance and dependability or select the "Original" Magnum rollers, which have set the industry standards for over three decades.
Bearingless rollers are optional on some models to give you years of use in tough, corrosive environments.

Outstanding Options

• Powder Coat/Anodized Finish
Match your color specifications with a tough, appealing powder-coat or anodized frame. Choose from a variety of colors to match your special theme.

• Specialty Coated Shaftline Components
Add years to the life of your counterbalance assembly with our specialty coated drums, cones and couplers.

• Hinge Gasket Option
Add hinge gaskets for under your stainless steel hardware for additional bi-metallic corrosion protection. Included in Platinum hardware models.

• Optional Panel Materials
Specify any 1/8" single wall or 5/8" multi-wall panel material to create the door product that meets your applications specifications. Choose from lexan, acrylic, aluminum, ABS and many more.
